

B01 - ForNAV Setup

Install ForNAV on your local machine.

You need to make sure a supported version of NAV is installed.

1. Download from www.fornav.com
2. Run the installer. Use the default settings

Import the ForNAV report Pack

3. Open the ForNAV designer.
4. Select New > Download ForNAV report pack
5. Use object range 70000
6. Import the downloaded txt file in NAV

Configure ForNAV and NAV

7. Enable OData on the NAV Service Tier
8. Run the ForNAV setup wizard. Use the default settings
9. Make sure the FieldsEx webservice is created. Copy the OData url
10. Open the ForNAV designer. Go to Setup
11. Paste the OData url and test
12. In the NAV tab provide information about your NAV database
