

## A05 - Report based on Query data

Create new report that uses data from query 100, "Top Customer Overview"

1. Import Table 88050, "100 Top Customer Overview" in C/Side;
2. In the ForNAV designer select New, Report Templates, select the List Template;
3. Save the object in the NAV database. Go to the properties of the report. Name the object Customer Top 100 and object no. 88055. Save and close the designer;
4. Open the NAV object designer, select report 88055. Run this from the object designer and select "Open Designer";
5. Select the properties of the List DataItem and change the Data Item Table to "100 Top Customer Overview";
6. In the Temporary property select True;
7. In Data Item Table View set Sorting to "Sales (LCY)" and Order to Descending;
8. Add these fields to the Body1 section as a table:
  - Name
  - Sales (LCY)
  - Profit (LCY)
  - Salesperson Name
  - Country Region Name
9. Add the captions for those fields in the Header1 section;
10. Close the ForNAV report designer and open the report in C/Side. Add the function FillTempListTable from A05 - C-AL code to add.txt and the call to it in the OnPreReport trigger;
11. Run the report and select Preview.
