I04 - Multilanguage

Translate the report

Start with the completed report from I03, Report 88004. Save that as a new report.

1. Open the report in the Object Designer;
2. In the Header - OnAfterGetRecord() add the Language table as a variable;
3. In the Header - OnAfterGetRecord() add this line of code:

```
CurrReport.LANGUAGE(Language.GetLanguageID("Language Code"));
```

4. Open the report in the ForNAV designer;
5. Preview the report for an Invoice with a different language code;
6. Use as many of the Currreport.Standardcaptions as possible:
   o For example, add the field CurrReport.StandardCaptions.YourReference to the header of your report.
7. Use label fields to translate the fields that are not translated by Dynamics NAV or ForNAV;
8. Delete the Line.FieldCaptions.No field in the lines header;
9. Select Label from the standard controls and drag it to the Lines Header where you deleted the Line.FieldCaptions.No field;
10. Go to the properties of your label field and drill down into the Caption – Multilanguage property;
11. Add the caption in English (ENU) and the language of your customer;
12. Preview the report and note the changes.

Add an HTML format label in the footer wishing your customers a merry Christmas.

13. Make some space in the footer;
14. Select Label from the standard controls and drag it to the free space in the Footer;
15. Go to the properties of your label field and drill down into the Caption – Multilanguage property;
16. Add a caption in English (ENU) and drill down into the text;
17. Add this line of formatted text:

<p style="text-align:center">Merry <mark style="background-color:red">Christmas</mark></p>

18. Select save as html;
19. Repeat for the language of your customer;
20. Preview the report and note the changes.
