I01 - Conversion

Convert the classic report and RDLC reports

1. Open the ForNAV converter;
2. In the Tabledefinitions file name or web service field add the fields webservice and test;
3. In the Input file field add the path to REP88005 - Classic.txt;
4. In the output file fields add the path and REP88005 - ForNAV.txt;
5. Click Convert.

Convert the RDLC report

6. Open the ForNAV converter;
7. Make sure you have the Convert RDLC reports to ForNAV reports checkbox marked;
8. In the advanced tab in the field Add to object id enter 88000;
9. In the Input file field add the path to REP101.txt;
10. In the output file fields add the path and REP88101.txt;
11. Click Convert.

Convert the reports to an extension

12. Create a new extension and call it I01 – Extension;
13. Download Symbols;
14. Set the launch.json to your local Microsoft Dynamics 365 Business Central database;
15. Add these lines to the settings.json (Ctrl + Shift + P > Open Settings (JSON)):

```
"al.assemblyProbingPaths": [
        "./.netpackages",
        "C:/Program Files/Microsoft Dynamics 365 Business
Central/130/Service/Add-ins",
        "C:/Program Files/Reports ForNAV/Add-ins/ReportsForNAV"
]
```

16. In app.json add the line "target": "Internal" and change the idRange to 89000 to 89999;
17. Open the ForNAV converter;
18. In the Tabledefinitions file name or web service field add the Application Symbols file from your extension;
19. In the Input file field add the path to REP88005 - Classic.txt;
20. In the output file fields add the path and <your extension folder>\REP88005 - ForNAV.al;
21. Click Convert;
22. Renumber the converted report to 89005;
23. In the Input file field add the path to REP101.txt;
24. In the advanced tab in the field Add to object id enter 89000;
25. In the output file fields add the path and <your extension folder>\REP88101.al;
26. Click Convert;
27. Fix any compile errors and publish your extension;
28. Preview the reports with the ForNAV Modern Object Explorer.
